Investigation: USG Whole abdomen

REPORT

Liver is bulky in size (~17cm) and shows raised echogenicity. No evidence of mass lesion seen. IHBR and hepatic veins are not dilated. **Portal vein** is seen normal in course and caliber.

Gall bladder is seen distended partially with multiple calculi in the lumen (average size ~7.5mm), and diffuse wall thickening also noted.

CBD is seen not dilated. No evidence of intraluminal lesion seen.

Pancreas is normal in shape, size and echotexture. No evidence of mass lesion seen. **MPD** not dilated.

Spleen is normal in shape, size and echotexture. No evidence of parenchymal lesion seen.

Both the **Kidneys** are normal in shape, size and echotexture. No evidence of mass lesion seen. Perfusion maintained normal bilaterally. CMD is maintained normally. PCS and ureter on both sides are not dilated.

Urinary bladder is seen distended normally. No evidence of intraluminal lesion is seen. Wall thickness is seen normal.

Uterus is seen mildly anteverted in position, normal in shape, size and echotexture.

Endometrium is homogeneously echogenic and not thickened.

Adnexae: Both the **adnexae** are seen normal.

No evidence of free fluid is seen in the pelvic cavity.

No evidence of lymphadenopathy seen.

Impression:

- Hepatomegaly with Fatty infiltration (moderate).
- Cholelithiasis with cholecystitis.

Radiologist

Disclaimer:

Ultrasound has its limitations and the result should be correlated with clinical and other relevant patient data. All conditions/lesions cannot be ruled out on Ultrasound. If clinically suspected, further evaluation can be done with CT/MRI/ pathological investigations. This is not for medico-legal purpose. Even though this scan has been performed as per current standard guidelines, certain abnormalities may go undetected due to technical limitations, patient body habitus and gas shadows.
