Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNAC from Left cervical lymph node

CLINICAL DETAILS: Swelling of left side of neck, since 1 month, History of weight loss and previous TB , patient took ATT, no history of fever, ear discharge, history of gudaku chewing. On examination, there was single swelling in 1a region which was 1x1cm in size and was firm not associated with pain.

GROSS DESCRIPTION: Aspirate was blood mixed

MICROSCOPIC DESCRIPTION:FNA smears are richly cellular show heterogenous population of reactive lymphoid cells composed of centrocytes, centroblasts , immunoblasts and tingible body macrophages against hemorrhagic background. No atypical cells or granuloma seen. No evidence of malignancy in the smears seen.
Special stain for AFB is negative

IMPRESSION:

FNAC from Left cervical lymph node
Reactive lymphadenitis

Note:

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of irregular infrequent cycles , mild lower pain P/S- cervix healthy, vagina healthy, no discharge LMP-27.10.22

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Inflammatory Smear

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of pain in abdomen P/S-Cervix and vagina healthy

GROSS DESCRIPTION: one prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Reactive cellular changes associated with inflammation.

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:USG guided FNAC from anterior neck swelling

CLINICAL DETAILS:Complain of anterior neck swelling since 1 year , moves with deglutition, Complain of changes in voice. USG- Right lobe of thyroid -solid hyper echoic lesion . NO calcification seen .Left lobe thyroid normal

GROSS DESCRIPTION:Blood mixed aspirate (Aspirator Dr. Aditya Tiwari PG Jr. radiodiagnosis)

IMPRESSION:

USG guided FNAC from anterior neck swelling 06-01-23

- The Bethesda system of reporting Thyroid cytopathology - **Category IV- Hurthle cell lesion /neoplasm** with cellular papillary clusters having fibrovascular cores
- Blood mixed with thick and thin colloid , papillaroid clusters of follicular epithelial cells, sheets of benign follicular epithelial cells in micro and macro follicles with extensive Hurthle cell change .
- No nuclear features of papillary thyroid carcinoma .**
- Scattered dispersed lymphocytes foamy macrophages histiocytic granuloma

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Inflammatory Smear

Note : Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of lower abdominal pain and whitish discharge P/S-Mucoid discharge present

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Inflammatory smear.

Note :Repeat smear after inflammation subsides.

Comments:

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNAC of left scapular swelling

CLINICAL DETAILS:Swelling on left scapular region, associated with pain since 6 months, no history of weight loss, TB contact. On examinationswelling soft to firm, mobile 2x2cm, overlying skin normal.

GROSS DESCRIPTION: Aspirate was fatty, greasy.

MICROSCOPIC DESCRIPTION:FNA smears from scapular swelling show fragments of fibroadipose tissue, on lipoproteinaceous haemorrhagic background.

IMPRESSION:

FNAC of left scapular swelling

Features suggestive of lipoma.

Exfoliative Cytology

SPECIMEN:Pleural fluid for cytology

CLINICAL DETAILS:Complaint of shortness of breath and cough since 1 month, abdominal distension since 2 weeks, and fever since 2 days, there also is history of significant weight loss, no known history of TB, On CECT(11/1/23 outside)- Bilateral pleural effusion with underlying lung collapse, Cytology(8/1/23 outside)- Positive for malignant cells.

GROSS DESCRIPTION:Volume- 7ml, colour- yellow, appearance-slightly turbid, Clot- absent

MICROSCOPIC DESCRIPTION:FNA smears show scattered mature lymphocytes and red blood cells against fluidy background.

IMPRESSION:

Pleural fluid for cytology

NEGATIVE FOR MALIGNANT CELLS, THE INTERNATIONAL SYSTEM FOR REPORTING SEROUS FLUID CYTOLOGY -CATEGORY II

Note:Cell block is under process, if any additional finding seen, an addendum report will follow.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Cervical/vaginal conventional smear for papanicolaou's staining
(The 2014 Bethesda System)

CLINICAL HISTORY: Routine screening cervix healthy vagina healthy no discharge

GROSS DESCRIPTION: One prepared slide received labeled as ectocervix.

SPECIMEN ADEQUACY:

Unsatisfactory for evaluation; Specimen processed and examined but unsatisfactory for evaluation of epithelial abnormality because of insufficient squamous cellularity.

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: FNA smears from left breast swelling

CLINICAL DETAILS: Complain of lump in breast since 2 years. Nipple discharge reddish on and off. USG- Left breast - well defined lobulated swelling hyperechoic lesion 1.4x1.1 cm . O/E- ill defined single swelling irregular surface . 2x3 cm , firm , overlying skin normal. No lymph node palpable. Contralateral breast is normal .

GROSS DESCRIPTION: 1 ml of clear fluid aspirated swelling regressed partially. Fna done from residual swelling - blood mixed aspirate.

MICROSCOPIC DESCRIPTION: FNA smears are moderately cellular show ductal epithelial cells arranged in sheets and papillary structures. The papillary structures show regimenting of cells. Individual ductal cells show increased N:C ratio with scant cytoplasm . Nuclei show irregular nuclear membrane with irregularly distributed chromatin. Many cystic macrophages are present.

Cell block show ductal epithelial cells with increased N:C ratio, having scanty to moderate cytoplasm. Nuclei show large prominent nucleoli. There is paucity of myoepithelial cells.

IMPRESSION:

FNA smears from left breast swelling

Suspicious for malignancy -IAC Yokohama Category IV.

Note: Advice - Needle core biopsy and histopathological examination for definite diagnosis.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of continous bleeding P/S- Bleeding through os,

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT:

Inflammtory smear with Shift in flora suggestive of bacterial vaginosis.

Note :Repeat smear after inflammation subsides.

Comments:

1. Cerviacal cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommanded to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.
