LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Known case of Total abdominal hysterectomy with bilateral salphingo - oophorectomy Vault healthy

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion/ malignancy

INTERPRETATION /RESULT:

ATROPHIC SMEAR

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Exfoliative Cytology

SPECIMEN:Pleural fluid for cytology

CLINICAL DETAILS:Complaint of shortness of breath and left sided chest pain. On examination- diminished breath sounds, no history of TB , diabetes mellitus, hypertension. Chest xray shows bilateral pleural effusion more on left side.

GROSS DESCRIPTION:Volume-30ml, Colour- pale yellow, Appearance-hazy, Clot-absent

MICROSCOPIC DESCRIPTION:Cyto centrifuged smears are scanty cellular show only mature lymphocytes against proteinaceous background. No atypical cells seen.
Special stain for AFB is negative

IMPRESSION:

Pleural fluid for cytology

NEGATIVE FOR MALIGNANT CELLS (INTERNATIONAL SYSTEM OF REPORTING SEROUS FLUID- CATEGORY II)

Note:Cell block is under process, if any additional finding seen, an addendum report will follow.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNAC Right posterior cervical triangle region swelling

CLINICAL DETAILS: Patient is a known case of disseminated tuberculosis, had taken ATT for 2 months later shifted to homeopathic treatment for 2 years. Swelling present in right posterior cervical triangle of neck since 1.5 years, gradually increasing in size, associated with fever and weight loss. O/e: Right - a single, well defined, partially -mobile, firm lymph node with size ranging from 3x5 cm present, overlying skin normal. Left - multiple subcentrimetre matted lymph node seen. Oral cavity: no significant abnormality..

GROSS DESCRIPTION: Blood mixed aspirate.

IMPRESSION:

FNAC Right posterior cervical triangle region swelling-03-01-23

- Granulomatous lymphadenitis with superadded suppuration
- Tuberculosis is a possibility
- Recommend microbiological evaluation for mycobacteriae

Note:

Addendum:

4.1.2023- Acid fast bacilli noted on special stain.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNAC , bilateral inguinal lymph node swelling

CLINICAL DETAILS:Known case of Pleomorphic synovial sarcoma of urinary bladder (H-8543/22).
Complain of bilateral inguinal lymph node swelling since 15 days . O/e: left inguinal lymph node single, well defined, non tender, firm, over left superior inguinal ring , measuring 1x1 cm, overlying skin is normal. Right inguinal lymph node single, well defined, non tender, firm, over Right superior inguinal ring , measuring 1x1 cm, overlying skin is normal.

GROSS DESCRIPTION:Whitish blood mixed aspirate

IMPRESSION:

FNAC , bilateral inguinal lymph node swelling -03-01-23

-Metastatic high grade poorly differentiated malignancy

-Refer to biopsy no 22HP008543

-IHC will be attempted on cell block

- Cellular smears with discohesive, dispersed, large polygonal tumor cells with abundant granular cytoplasm , fuzzy cell borders, large pleomorphic lobulated nuclei with prominent nucleoli.

-Also noted are multinucleated tumor cells

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of irregular spotting on and off P/S cervix healthy, vagina healthy.

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of heavy menstrual bleeding since 3 months. P/S- only mild mucoid discharge present

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy with mild inflammatory background

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: FNA left breast lump.

CLINICAL DETAILS: C/o bilateral breast lump since 10 days, pain over right breast lump since 2 days. O/e- Left breast lump in lower outer quadrant, well defined, 2x1 cm overlying skin normal. After aspiration swelling regressed partially. No lump was palpable in right breast. No lymphadenopathy No h/o trauma, family history, contraception usage. USG- Right breast adenoma.

GROSS DESCRIPTION: 3ml of Blood mixed turbid fluid aspiarte.

IMPRESSION:

FNAC LEFT BREAST LUMP 04-01-23

- IAC Yokohama category II- Benign - inflammatory lesion with ill defined granulomas
- Mixed inflammation acute and chronic
- Scattered ill defined granulomas
- Few scattered benign ductal epithelial cells
- Special stain for AFB is non contributory

Note: Recommend incision and drainage /extirpation /antibiotic therapy / biopsy of any unusual focus. Recommend correlation with microbiological evaluation.

Exfoliative Cytology

SPECIMEN:Urine for cytology

CLINICAL DETAILS:Complaint of dysuria with lower urinary tract symptoms(increased frequency and nocturia) since 1 year. On USG (26/12/22 Outside)-right lower ureteric calculus, two 4.3mm and 6.3mm stones, urinary bladder stone 50.4mm

GROSS DESCRIPTION:Volume-30ml, Colour-reddish, Appearance- hazy, Clot- absent

MICROSCOPIC DESCRIPTION:Cytospin smears are highly cellular show scattered benign squamous epithelial cells, and transitional epithelial cells against hemorrhagic background. Few clusters (papillaroid fragments) of tightly packed atypical cells seen. Cells have high N:C ratio with regular nuclear membrane, and nuclei occupying >0.5 to <0.7 of cell and moderate amount of cytoplasm. Nuclear overcrowding seen . Few degenerative cells seen in background.

IMPRESSION:

Urine for cytology

Suggestive of Low grade Urothelial carcinoma

Note:Cell block is insufficient.

Adv: Histological confirmation.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of white discharge per vaginum with itching since 2 years.
P/S-mild greenish white discharge present

GROSS DESCRIPTION: One prepared air dried slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Epithelial cell abnormality: squamous

MICROSCOPY:

Smears show many intermediate squamous epithelial cells and parabasal cells. Some of the cells in clusters show high N:C ratio with irregular nuclear membrane, clumped chromatin and scant cytoplasm. Background is dirty hemorrhagic.

INTERPRETATION /RESULT:

HIGH GRADE SQUAMOUS INTRAEPITHELIAL LESION (HSIL)

Note :Correlate clinically.

Adv: Colposcopic bx for confirmation.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Post menopausal 15 yrs Cervix and vagina healthy.

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT:

Shift in flora suggestive of bacterial vaginosis

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN :Liquid based preparation (The 2014 Bethesda System)

CLINICAL DETAILS :Complain of itching in perianal area with urinary incontinence

GROSS DESCRIPTION :One prepared slides

SPECIMEN ADEQUACY :

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION :

Negative for intraepithelial lesion/ malignancy

INTERPRETATION /RESULT :

Atrophic smear, predominately parabasal cells with inflammatory background

Note :Repeat smear if clinically indicated

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Exfoliative Cytology

SPECIMEN: BAL fluid for cytology.

CLINICAL DETAILS: ?Acute on chronic silicosis ?Tuberculosis. C/o cough with expectoration, headache, breathlessness since 1 month. Chest X-ray- bilateral nodules present in right upper, middle, lower zone, left middle and lower zone.

GROSS DESCRIPTION: Received 10 ml of colourless, hazy fluid. Clot absent

MICROSCOPIC DESCRIPTION: Cyto centrifuged smears are cellular with respiratory epithelial cells, benign squamous cells, pigmented macrophages and inflammatory infiltrates against thin mucoproteinaceous background. No extracellular pigments seen. No granuloma seen. Special stain for AFB is negative

IMPRESSION:

BAL FLUID CYTOLOGY

NEGATIVE FOR MALIGNANT CELLS (INTERNATIONAL SYSTEM OF REPORTING SEROUS FLUID- CATEGORY II)

Note: Cell block is under process, if any additional finding seen, an addendum report follow.

Exfoliative Cytology

SPECIMEN:Broncho alveolar lavage fluid for cytology

CLINICAL DETAILS: Right hydropneumothorax with pulmonary TB

GROSS DESCRIPTION:Volume-10ml, Colour-reddish, Appearance- hazy, Clot- coagulum present.

MICROSCOPIC DESCRIPTION:Cytocentrifuge smears show scattered benign squamous epithelial cells, endobronchial cells, alveolar macrophages and mixed inflammatory cells against dirty mucoid background. Bacterial colonies noted . No atypical cells seen.
Special stain for AFB is negative

IMPRESSION:

Broncho alveolar lavage fluid for cytology
Negative for malignancy .

Note:Cell block is insufficient

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Post hysterectomy query of PID. P/S- vault visualized , bilateral fornix free

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Unsatisfactory for evaluation; Specimen processed and examined but unsatisfactory for evaluation of epithelial abnormality because of insufficient squamous cellularity, obscuring inflammation and blood.

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.
