LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Lump in left breast.LMP- 20-11-22

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT:

Shift in flora suggestive of bacterial vaginosis.

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNAC of right paravertebral swelling.

CLINICAL DETAILS:Complaint of swelling on back since 1 year, recurrent pus discharge, no history of trauma, fever or weight loss.On examination- single swelling in right paravertebral region 1x2cm in size, punctum present, covered with bluish scar, mobile in one direction attached to overlying skin.

GROSS DESCRIPTION:Pultaceous material was aspirated.

MICROSCOPIC DESCRIPTION: FNA smear studied shows plenty of anucleated squames against clean background .

IMPRESSION:

FNAC from right paravertebral swelling
Suggestive of Keratinous cyst.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: USG guided FNA right level Ib lymph node.

CLINICAL DETAILS: C/o oropharyngeal mass, change in voice, difficulty in swelling since 1.5 months.
Prev HPE (H-5692-22, 8/9/22) - Possibility of lymphoproliferative disorder.

GROSS DESCRIPTION: Bloody aspirate.(Aspirator Dr. Logeshwar PG Jr, Radiology)

MICROSCOPIC DESCRIPTION:FNA smears show polymorphous population of mature lymphocytes, plasma cells and centrocytes against dense hemorrhagic background. No atypical cells seen.
Cell block sections are richly cellular with polymorphous population of lymphoid cells with few clusters of cell having crushing artifact .

IMPRESSION:

FNA RIGHT LEVEL IB LYMPH NODE
SEE MICROSCOPIC DESCRIPTION

Note:Advice IHC- for cell block 12/23 for further evaluation .

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN :Liquid based preparation (The 2014 Bethesda System)

CLINICAL DETAILS :Post menopausal , follow up post radiotherapy known case of Ca cervix

GROSS DESCRIPTION :One prepared slide

SPECIMEN ADEQUACY :Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION :Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT :

Smears show sheets of metaplastic squamous cells with intermediate squamous cells . Few cells show radiotherapy changes
Negative for intraepithelial lesion or malignancy

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Exfoliative Cytology

SPECIMEN:CSF

CLINICAL DETAILS:K/C/O- Pre B cell ALL on maintenance phase of chemotherapy. Routine microscopy (16-1-23) WBC- 2000 cells DLC: N-05%, L-95% .

GROSS DESCRIPTION:02 ml, colourless, clear, clot absent.

MICROSCOPIC DESCRIPTION:Cytospin smears are richly cellular, packed with lymphoblasts with scattered mature lymphocytes and occasional neutrophils against clear background. Blasts are 2-3 times of mature small lymphocytes with high N:C ratio, open chromatin, irregular nuclear membrane (deep cleft), 2-3 nucleoli and scant cytoplasm . No auer rods seen.

IMPRESSION:

CSF
Positive for malignancy

Note:Patient is a known case of B cell ALL

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Primary infertility. P/S-Cervix central no discharge or bleeding, ectropion present. LMP-30-12-2022

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy

Inflammatory smear

Note :Repeat smear after inflammation subsides

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN :Liquid based preparation (The 2014 Bethesda System)

CLINICAL DETAILS :Complain of pain in lower abdomen. P/S- os central .

GROSS DESCRIPTION :One prepared slides

SPECIMEN ADEQUACY :
Satisfactory for evaluation

GENERAL CATEGORISATION :Atypical epithelial cell-squamous, glandular

INTERPRETATION /RESULT :

- Atypical epithelial squamous cells, atleast low grade squamous intraepithelial lesion (LSIL) with, atypical glandular cells- endocervical, not otherwise specified (NOS) and acute inflammation
- There is no history given for menopause and local examination
- Background is hemorrhagic
- Therefore HSIL cannot be excluded.

Note :Endometrial sampling, colposcopy and biopsy recommended

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: white discharge present

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Inflammatory smear

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Exfoliative Cytology

SPECIMEN: Peritoneal fluid for cytology.

CLINICAL DETAILS: Metastatic carcinoma stomach with perforation peritonitis. C/o pain abdomen since 2 days, multiple episodes of vomiting since 1 day. Known alcoholic. Abdominal distension present.

GROSS DESCRIPTION: Received 5 ml of pale yellow, turbid fluid.

IMPRESSION:

PERITONEAL FLUID CYTOLOGY 04-01-23

-IAC Category 2- Inflammatory (acute on chronic with numerous bacilli and coccobacilli)

-Degeneration artifacts seen

-

Note: Correlate with microbiological evaluation

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Uterine fibroid with umbilical hernia. P/S- Cervix bulky, central,

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT:

Shift in flora suggestive of bacterial vaginosis.

Inflammatory smear

Note :Repeat smear after inflammation subsides

Exfoliative Cytology

SPECIMEN:BAL for cytology

CLINICAL DETAILS:Complain of chest pain since 1 year with hemoptysis , ?PTB.ect (07-12-23)-dilated bronchi in apical segment , Bilateral subpleural nodule.CBNAAT- AFB not detected .

GROSS DESCRIPTION:05ml, colourless, slightly turbid fluid. Clot present.

IMPRESSION:

BAL for cytology 04-01-23

- Endobronchial cells, foamy macrophages noted.
- Negative for malignant cells
- Occasional degenerated clusters of histiocytes and lymphocytes but no well defined granulomas
- Special stain for AFB non contributory

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: FNA from right lumbar swelling.

CLINICAL DETAILS: ?Infected sebaceous cyst. C/o swelling in right lumbar region since 3 years.
Previous history of similar swelling present. No h/o fever, trauma, fever, TB.

GROSS DESCRIPTION: Pus like aspirate.

IMPRESSION:

FNA RIGHT LUMBAR SWELLING 04-01-23

- Epidermal inclusion cyst with superadded suppurative inflammation
- Special stain for AFB is non contributory

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: FNA right arm swelling.

CLINICAL DETAILS: C/o multiple swelling over body since 1 year, gradually increasing in size, not associated with pain. No h/o fever, weight loss. O/e Right arm lateral aspect, swelling measures 1x1 cm, firm mobile, overlying skin normal.

GROSS DESCRIPTION: Fatty aspirate.

MICROSCOPIC DESCRIPTION: FNA smears from right arm swelling show fragments of benign adipocytes against hemorrhagic background . No atypical cells or granulomas seen .

IMPRESSION:

FNA right arm swelling.

Benign lipomatous lesion- s/o Lipoma
