LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of polyp coming out of cervix P/S- cervical size not visible due to polyp

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of abdominal pain white discharge present

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT:

Inflammatory smear with Shift in flora suggestive of bacterial vaginosis.

Note :: Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Exfoliative Cytology

SPECIMEN: BAL fluid for cytology

CLINICAL DETAILS: ?TB. CECT chest (15.11.22)- Consolidation in upper lobe of right lung with multiple tiny peribronchial nodules s/o active infective etiology.

GROSS DESCRIPTION: Received 10 ml of blood tinged, hazy fluid. Clot absent

MICROSCOPIC DESCRIPTION: Cytocentrifuged smears are moderately cellular show mixed inflammatory infiltrate comprised of polymorphs, lymphocytes, pigmented macrophages with ciliated bronchial cells and benign squamous epithelial cells on thin proteinaceous background. Bacterial colonies seen. No atypical cells seen.

IMPRESSION:

BAL FLUID CYTOLOGY

SEE MICROSCOPIC DESCRIPTION

Note: Cell block is under process, if any additional finding seen, an addendum report will follow.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: One slide giemsa stained no AF/044/22 .

CLINICAL DETAILS: Complian of swelling on left side of anterior part of neck since 1 month with weight ;loss NO complain of dysphagia, pain . Fnac done outside (25/11/22)- Features suggestive of small round cell tumor . USG abdomen (15/12/22)- Few well defined hypoechoic mass in peripancreatic and right paraaortic region ? Lymphoma .

GROSS DESCRIPTION: One slide recieved giemsa stained cyto no (AF/044/22)

MICROSCOPIC DESCRIPTION: FNA smears show clusters of round cells with hyperchromatic irregular nuclei and scant cytoplasm . At places forming rosetteoid pattern with marked crushing artifact against hemorrhagic background . Occasional mitotic figures seen

IMPRESSION:

One slide giemsa stained no AF/044/22 .
Suggestive of Malignant round cell tumor

Note: Correlate with biopsy findings of H-146/23

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: FNA chest swelling

CLINICAL DETAILS: C/o swelling on chest left side, since childhood, gradually increasing in size associated with pain on touch. No h/o trauma, fever, pus discharge. O/e- single 2x2.5 cm swelling on left side of chest, irregular margin, irregular surface with thinned out overlying skin.

GROSS DESCRIPTION: Bloody aspirate.

IMPRESSION:

FNA CHEST SWELLING 09-01-23

-Benign spindle cell lesion

-Suggestive of benign nerve sheath tumor

Exfoliative Cytology

SPECIMEN:BAL for cytology

CLINICAL DETAILS:Known case of hypertension , diabetes mellitus, hypothyroidism? organised pneumonia

GROSS DESCRIPTION:Recieved 10 ml, whitish, hazy, clot present .

MICROSCOPIC DESCRIPTION:Cytocentrifuged smears are richly cellular show sheets of polymorphs, histiocytes and nuclear debris with occasional benign squamous epithelial cells No atypical cells or granuloma seen.
Special stain for AFB is negative

IMPRESSION:

BAL for cytology

SEE MICROSCOPIC DESCRIPTION

Note:Cell block is under process, if any additional finding seen, an addendum report follow.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Cervix healthy, vagina healthy.

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: USG guided FNA from anterior neck swelling

CLINICAL DETAILS: Complaint of anterior neck swelling since 2.5 months. On examination- left sided 3x4cm thyroid swelling, moves with deglutition, firm, non-tender. TSH-0.007, FT3-13.82, FT4- 2.84. On USG- Both thyroid lobes appear bulky, heterogenous in echotexture, no obvious nodule can be seen. Significantly increased vascularity is noted on color doppler.

GROSS DESCRIPTION: Colloid mixed aspirate.

MICROSCOPIC DESCRIPTION: USG guided FNA smears from both lobes of thyroid are richly cellular show multiple large sheets, macro as well as microfollicles formed by follicular epithelial cells. Some of the cells show prominent Hurthle cell changes. The cells are relatively monomorphic. No significant nuclear changes noted. Background show thick colloid material. No cystic macrophages seen.

IMPRESSION:

USG guided FNA from anterior neck swelling

FEATURES SUGGESTIVE OF HYPERPLASTIC THYROID NODULE- THE BETHESDA SYSTEM
FOR REPORTING THYROID CYTOPATHOLOGY- CATEGORY 2

Note: Clinico-radiological correlation.

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy

Inflammatory smear

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Post vaginal hysterectomy with pelvic floor repair due to prolapse.

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT:

Shift in flora suggestive of bacterial vaginosis.

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Exfoliative Cytology

SPECIMEN: Urine for cytology.

CLINICAL DETAILS: Post op DVR+ CABG with AKI.

GROSS DESCRIPTION: Received 10 ml of pale yellow, hazy fluid.. Clot absent

IMPRESSION:

Urine for cytology. 09-01-23

-Negative for malignant cells

-There are several degranulating eosinophils, benign urothelial cells, metaplastic squamous cells and lymphocytes

-Also noted are candidial organisms.

Note: Cell block is under process, if any additional finding seen, an addendum report will follow.

Exfoliative Cytology

SPECIMEN: CSF for cytology.

CLINICAL DETAILS: K/c/o T cell ALL on BFM day 20.

GROSS DESCRIPTION: Received 3 ml of colourless, clear fluid. Clot absent

MICROSCOPIC DESCRIPTION: Cytospin smears are scanty cellular with mature lymphocytes. No atypical cells seen

IMPRESSION:

CSF CYTOLOGY

NEGATIVE FOR MALIGNANCY (INTERNATIONAL SYSTEM OF REPORTING SEROUS FLUID-CATEGORY II)

Exfoliative Cytology

SPECIMEN: Pleural fluid for cytology.

CLINICAL DETAILS: Right side exudative pleural effusion under evaluation. ?PTB ?Malignancy. Chest X-ray- right side massive effusion.

GROSS DESCRIPTION:Received 50 ml yellowish, slightly turbid fluid.

IMPRESSION:

PLEURAL FLUID CYTOLOGY 09-01-23

- Lymphocytic effusion (moderate)- IAC - Category-2B
- No well defined granulomas
- Special stain for AFB has been non contributory

Note:Cell block is under process, if any additional finding seen, an addendum report will follow.

Exfoliative Cytology

SPECIMEN: BAL fluid for cytology

CLINICAL DETAILS: Right parapneumonic effusion with DVT. ?Lung malignancy. Chest X-ray- Right lower zone consolidation with blunting of CP angle. Previous cytology (22EC1872)-negative for malignant cells. CBNAAT - Negative for AFB. Bacterial culture- No bacterial growth after 48 hrs.

GROSS DESCRIPTION: Received 7 ml of colourless, slightly turbid fluid. Clot present

MICROSCOPIC DESCRIPTION: Cytocentrifuged smears are moderate cellular show polymorphs, lymphocytes admixed with respiratory epithelial cells and benign squamous epithelial cells against proteinaceous background. No atypical cells seen.

IMPRESSION:

BAL fluid for cytology

NEGATIVE FOR MALIGNANCY (INTERNATIONAL SYSTEM OF REPORTING SEROUS FLUID-CATEGORY II)

Note: Cell block is under process, if any additional finding seen, an addendum report will follow.
