LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Amenorrhoea P/S-cervix healthy vagina healthy no discharge

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT:

Inflammatory smear with Shift in flora suggestive of bacterial vaginosis.

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

CLINICAL DETAILS: C/o swelling in left breast since 20 days. Not associated with pain. No h/o fever, trauma, nipple discharge, O/e- Single well defined swelling in left breast at 6 'o clock position, measuring 1.5x1.5 cm in size, freely mobile, non tender firm in consistency, overlying skin normal.

GROSS DESCRIPTION: Blood mixed aspirate.

IMPRESSION:

FNAC LEFT BREAST LUMP 07-01-23

-IAC Yokohama category 2 -Benign.- fibroadenoma with apocrine change, columnar cell change and adenosis.

-Benign ductal epithelial cell clusters in staghorn pattern and sheets with extensive apocrine change , columnar cell change , usual ductal hypeplasia , adenosis and foamy macrophages

-In view of history follow up of breast cancer.

Note:Recommend biopsy and close follow up.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: cervix cetnral os pin point white discharge present

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy

Note :

Comments:

1. Cerviacal cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommanded to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: USG guided FNA from both lobes of thyroid

CLINICAL DETAILS: complaints of swelling in neck since 1.5 years and ulcer in mouth since 2-4 months. O/E : (usg guided) multiple hyperechoic nodules in b/l lobes and isthmus , right-2x3 cm and left-1x1cm .Right thyroid lobe TIRADS 3, Left thyroid lobe TIRADS 4.

GROSS DESCRIPTION:Blood mixed aspirate (Aspirator Dr. Priyank PG Jr Radiology)

MICROSCOPIC DESCRIPTION: USG guided FNA smears from right thyroid lobe are moderately cellular show follicular epithelial cells in sheets and groups.Follicular epithelial cells shows Hurthel cell changes. Groups of cells show dense lymphocytic infiltrate Background is haemorrhagic with scanty colloid material.No evidence of malignancy.

USG guided FNA smears from left thyroid lobe show scanty cellularity of benign follicular epithelial cells in follicular pattern and scattered singly. Background show colloid mixed with blood. No evidence of malignancy.

IMPRESSION:

USG guided FNA smears from right thyroid lobe

Right lobe of thyroid - LYMPHOCYTIC THYROIDITIS

USG guided FNA smears from left thyroid lobe

Left lobe of thyroid - Negative for malignancy

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: FNA back swelling.

CLINICAL DETAILS: C/o swelling over back since 3 months, associated with pain since 10 days. Previous h/o excision of infected sebaceous cyst from same site present. O/e medial aspect of left scapula, single swelling measures 6x5 cm, firm, tender, partially mobile, punctum present. Scar mark from previous surgery present.

GROSS DESCRIPTION: Pultaceous material.

MICROSCOPIC DESCRIPTION: FNA smears are paucicellular with singly scattered and clusters of anucleated and nucleated squames against clean background. No atypical cells or granulomas seen.

IMPRESSION:

FNA back swelling.
Epidermal inclusion cyst

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: FNAC, left breast lump

CLINICAL DETAILS: Swelling in the upper outer quadrant of left breast since 1 year, gradually increasing in size since 2-3 months. Not associated with pain, nipple discharge or menstrual cycle. O/E-Swelling is single, well defined, firm, with regular margins and surface measuring 1x1cm. No pain, tenderness or discharge.

GROSS DESCRIPTION: Greenish serous fluid

MICROSCOPIC DESCRIPTION: FNA smears are moderately cellular showing dual population of cells arranged in monolayered sheets, clusters, consisting of benign ductal epithelial cells and myoepithelial cells. Few ductal cells show apocrine change along with macrophages and bare bipolar nuclei in hemorrhagic background. No atypical cells seen.

IMPRESSION:

FNAC, left breast lump

Fibroadenoma - IAC Yokohama Category II

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNAC of swelling in left side of neck.

CLINICAL DETAILS:Complaint of multiple neck swelling since 1.5 year, associated with mild pain, no history of fever or weight loss. On examination- swellings were multiple supraclavicular,firm, non tender, well defined , mobile, from sub centimetric to 1.5x 1.5 cm

GROSS DESCRIPTION:Aspirate showed whitish material

MICROSCOPIC DESCRIPTION:FNA smear studied show high cellularit of cells, show polymorphous lymphoid cell population composed of macrophages, centrocytes, centroblasts and immunoblasts with areas of caseous necrosis are evident. Occasional epitheloid cells are seen in aggregates . Special stain ZN stain - no AFB seen.

IMPRESSION:

FNAC of swelling in left side of neck.

Necrotizing granulomatous lymphadenitis possibly of Koch's etiology.

Note:Correlate with radiological and microbiological findings

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: FNA from left breast swelling

CLINICAL DETAILS: Complain of bilateral breast swelling since 4 Years associated with pain gradually increasing in size . No history of trauma , fever weight loss or nipple discharge . O/E- single lump in left breast lower outer quadrant , well defined , mobile, firm , overlying skin normal . No lymph nodes palpable. Mammography- (15.01.23)-Left breast - Birads III. Well defined hypoechoic lesion .

GROSS DESCRIPTION: Blood mixed aspirate.

MICROSCOPIC DESCRIPTION: FNA smears are moderately cellular. Show epithelial cells in large monolayered sheets. Cells show eosinophilic cytoplasm, round to oval nuclei with fine chromatin. Singly scattered bare bipolar nuclei and myxoid stromal fragments are seen against hemorrhagic background.

IMPRESSION:

FNA from left breast swelling

Features suggestive of FIBROADENOMA - IAC Yokohama system for reporting breast fine-needle aspiration cytology-Category II.

Note: Correlate with radiological findings.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of heavy menstrual bleeding P/S- cervix healthy vagina healthy no discharge

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN :Liquid based preparation (The 2014 Bethesda System)

CLINICAL DETAILS :Complain of dyspareunia . P/S- Whitish discharge , cystocele grade 2

GROSS DESCRIPTION :One prepared slide

SPECIMEN ADEQUACY :Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION :Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT :
Inflammatory Smear

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: FNA Bilateral breast swelling.

CLINICAL DETAILS: C/o swelling in bilateral breast since 2-3 days. Not associated with pain. No h/o fever, trauma, nipple discharge, O/e- Left breast: Single well defined swelling in left breast at 6 o'clock position, measuring 1x1 cm in size, freely mobile, non tender, firm in consistency, overlying skin normal.

Right breast: Two well defined swelling in upper outer and lower inner quadrant, measuring 1x1 cm and 2x2 cm in size respectively, both are freely mobile, non tender, firm in consistency, overlying skin normal.

GROSS DESCRIPTION: Blood mixed aspirate.

IMPRESSION:

FNAC BILATERAL BREAST LUMP 07-01-23

-Right breast -IAC Yokohama category II- Benign

-Fibroadenoma

-Left breast -IAC Yokohama category I

- Acellular

-Non diagnostic
