LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Vomplain of frequent menses P/S-Bleeding from OS present

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNA from lump in right breast

CLINICAL DETAILS:Complain of swelling in lump in right breast since 2 years. Not associated with pain , menses. O/E- Swelling is present in upper outer quadrant of right breast which is single well defined, free mobile, nontender, measures 2x1cm and overlying skin show engorged veins , no history of nipple discharge present. Contralateral breast is normal. No palpable bilateral axillary lymphnodes. Nipple areola complex is normal. No any significant family history.

GROSS DESCRIPTION:8ml of straw coloured fluid aspirated

MICROSCOPIC DESCRIPTION:FNA smears and cytocentrifuge smears from fluid show only mature lymphocytes and scattered macrophages. No ductal epithelial cells seen. No atypical cells seen.

IMPRESSION:

FNA from lump in right breast

Simple benign cyst- SEE MICROSCOPIC DESCRIPTION

Note:Corelate with radiological findings and excisional biopsy .

Exfoliative Cytology

SPECIMEN:BAL for cytology

CLINICAL DETAILS:Known case of pericardial effusion , clinically tubercular,had taken ATT for 2 months. Complain of cough with fever . Chest X- ray- Bilateral upper , middle and lower lobe infiltrative. Bronchoscopy(06-01-23)- Left main bronchus narrowed due to edematous wall.

GROSS DESCRIPTION:05ml, blood tinged, hazy. Clot absent

IMPRESSION:

BAL for cytology 07-01-23

-IAC -Category IV- Suspicious of malignancy

-Adequate

-General categorization- Epithelial cell abnormality- Not otherwise specified

-Interpretation- Atypical squamous and glandular cells

-Special stain for AFB is non contributory.

Note:Cell block is under process, if any additional finding seen, an addendum report will follow.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of abnormal uterine bleeding P/S- White discharge present
LMP-25.12.22

GROSS DESCRIPTION: one prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Inflammatory smear with Reactive cellular changes associated with inflammation.

Note : Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: FNA right side facial swelling.

CLINICAL DETAILS: C/o facial swelling on right side since 1 month, gradually increasing in size, not associated with pain. No h/o weight loss, fever, trauma, sinusitis, nasal discharge, dental caries. O/e Right side swelling over maxillary region, uplifting naso-labial fold, deviating nasal septum, bulge of swelling also present inside mouth involving soft and hard palate on right side. Swelling is non tender, firm to hard in consistency, non moveable. Grade III tonsillitis also present. CT (2/11/22)- A well defined expansile cystic lesion 37x38x39 mm seen in right maxillary alveolar process with superior extension into right maxillary sinus and inferior meatus of right nasal cavity .

GROSS DESCRIPTION: Blood mixed aspirate.

IMPRESSION:

FNA RIGHT SIDE FACIAL SWELLING 07-01-23
-Blood only.

Note:As CT scan reveals bony lesion -FNAC is not the modality of choice for investigation .

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Cervix healthy, vagina healthy. LMP 5.1.22

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy

Inflammatory smear

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Routine screening Cervix and vagina healthy

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT:

Inflammatory smear with Shift in flora suggestive of bacterial vaginosis.

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of heavy menstrual bleeding LMP 5.11.22

GROSS DESCRIPTION: one prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Reactive cellular changes associated with inflammation

Note : Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Exfoliative Cytology

SPECIMEN: BAL fluid for cytology

CLINICAL DETAILS: C/o dry cough, shortness of breath since 1 year, oral ulcer since 8 months. HRCT Thoorax- architectural distortion with b/l uper lobes with ground glass opacity with cystic bronchiectasis.

GROSS DESCRIPTION: Received 4 ml of colourless, slightly turbid fluid. cLOT ABSENT

IMPRESSION:

BAL FLUID CTOLOGY 09-01-23

- Degenerated sample with occasional lymphocytes and neutrophils.
- Criteria for adequacy not met.

Note: Cell block is under process, if any additional finding seen, an addendum report will follow.

Exfoliative Cytology

SPECIMEN: Pleural fluid for cytology.

CLINICAL DETAILS: Left pleural effusion. Chest x-ray- right blunting of CP angle.

GROSS DESCRIPTION: Received 3 ml of yellow, slightly turbid fluid.

MICROSCOPIC DESCRIPTION: Cytospin smears show predominately reactive mesothelial cells with binucleation to multinucleated cells along with inflammatory cells comprised of lymphocytes, polymorphs and foamy histiocytes. No atypical cells or epithelioid cells seen.

IMPRESSION:

Pleural fluid for cytology.
Reactive mesothelial hyperplasia

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: Scrape cytology of both lip of labia

CLINICAL DETAILS: 75 year female, abdominopelvic mass (?ovarian uterine malignancy), leukoplakia present over both lip of labia.
USG (26.10.22) large abdominopelvic mass lesion suggestive of ?neoplastic etiology ? Ca uterus, CA-125- 758.96 U/ml

GROSS DESCRIPTION: Scrape cytology from leukoplakic patch on both lip of labia

MICROSCOPIC DESCRIPTION: Scrape smears show singly scattered and clusters of benign superficial squamous cells with occasional intermediate cells against keratinous background. No atypical cells seen.

IMPRESSION:

Scrape cytology of both lip of labia
Negative for malignant cells.

Exfoliative Cytology

SPECIMEN: CSF for cytology

CLINICAL DETAILS: Case of B cell NHL with encephalopathy, Biopsy suggestive of thymoma.

GROSS DESCRIPTION: 1 ml of colorless clear fluid with no clot.

MICROSCOPIC DESCRIPTION: Cytospin smears are acellular.

IMPRESSION:

CSF for cytology
Acellular

Note: Correlate clinically

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNAC, Swelling in the left occipital region.

CLINICAL DETAILS:Swelling in the left occipital region since 3 months, On Examination- Single swelling present, 2x2cm in size, Mobile, Cystic, Regular border, No puncta visible, No pain, tenderness, No H/o trauma.

GROSS DESCRIPTION:Aspirate, Fatty, Greasy and Blood mixed.

MICROSCOPIC DESCRIPTION:FNA smears are scanty cellular shows few benign spindle cells fragments. Cells are elongated with plump oval bland nuclei and pale eosinophilic cytoplasm against hemorrhagic background . No atypical cells sen.

IMPRESSION:

FNAC, Swelling in the left occipital region.
Benign spindle cell lesion.

Note:Correlate with excisional biopsy

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: FNAC, swelling right breast

CLINICAL DETAILS: C/O swelling in right breast for 1.5 month, not associated with pain, lactating mother. O/e right breast lump, upper inner quadrant, 2x2 cm mobile, nontender, firm, overlying skin normal, contra lateral breast normal, nipple areolar complex normal, no lymphadenopathy.

GROSS DESCRIPTION: Blood mixed fatty aspirate.

MICROSCOPIC DESCRIPTION: Smears show few benign ductal cells on background of neutrophils and macrophages. No atypical cells seen.

IMPRESSION:

FNAC, swelling right breast
CONSISTENT WITH ABSCESS
