Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:USG Guided FNAC left lobe of thyroid.

CLINICAL DETAILS:C/o Swelling in left lobe of thyroid since 3-4 years,On examination-single swelling of size, 3x3cm, soft to cystic midline swelling, with smooth surface, rounded, well defined, painless thyroid swelling, moves with deglutition. No features of hypo/hyperthyroidism.TFT (5/7/22 outside)TSH-0.506, T3-1.04, T4-7.5. On Radiological examination-CECT(7/11/22) left lobe of thyroid appears bulky with a well defined lesion of size 3.7x5.2x7.6cm.

GROSS DESCRIPTION:Blood mixed aspirate.(Aspirator .Dr. Shashikant SR radiology)

MICROSCOPIC DESCRIPTION:FNA smears are paucicellular show scattered benign follicular cells admixed with thick and thin colloid in background .No colloidophages seen.

IMPRESSION:

USG Guided FNAC left lobe of thyroid.

Benign thyroid aspirate.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Routine screening Bulky uterus

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNAC, from multiple swellings on Left side of scalp and Left forearm

CLINICAL DETAILS:H/o multiple swellings all over the body since 15 years, gradually increasing in size, largest on scalp, Family history of similar swelling in mother, daughter, son. On Examination- Multiple swellings seen all over the body, On left scalp 3x3.5 cm in size, On left hand 0.5x0.5cm in size. Swellings were firm to soft, with regular margins and regular contours associated with on and off pain.

GROSS DESCRIPTION: Aspirate-1) Head- pultaceous and blood mixed,2) Hand - pultaceous and blood mixed.

MICROSCOPIC DESCRIPTION

1-FNA smears studied from the scalp swelling show clusters and few singly scattered anucleated and nucleated squames with foreign body giant cells on a dirty background. Occasional hair shafts and sebaceous glands noted. No basaloid cells seen.

2- FNA smears studied from the hand swelling shows only hemorrhage .

IMPRESSION:

FNA from scalp swelling

Differentials considered are-

1)Dermoid cyst, 2) Epidermal inclusion cyst, 3) Trichilemmal cyst.

Note:Advice excisional biopsy for further categorisation.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Cervix and vagina healthy

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT:

Inflammatory smear with Shift in flora suggestive of bacterial vaginosis.

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Exfoliative Cytology

SPECIMEN: BAL fluid for cytology.

CLINICAL DETAILS: K/c/o tuberculosis. C/o cough, shortness of breath, fever since 1 month.
AFB/CBNAAT- Negative.

GROSS DESCRIPTION: Received 5 ml of reddish, turbid fluid. Clot present

IMPRESSION:

BAL fluid for cytology.05-01-23

- Acute purulent exudate
- Abundant bacterial flora, cocci in chains and coccobacilli
- Correlate with microbiological evaluation
- Special stain for Acid fast bacilli is non contributory

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNAC, from right abdominal swelling and swelling left forearm.

CLINICAL DETAILS:H/o multiple painless swellings in hand, back and right abdomen, since 12 years, Family H/o similar mobile multiple swelling on the maternal side. On Examination- swelling in right abdominal area -3x4cm, swelling in back- 3x3cm, swelling in left forearm-2x1cm, Swelling in abdominal area was diffuse, regular contour, firm, and associated with pain, swelling in left forearm was diffuse, soft, mobile.

GROSS DESCRIPTION:Aspirate was greasy.

MICROSCOPIC DESCRIPTION:FNA smears from abdominal swelling and left forearm swelling show fragments of mature adipose tissue on a greasy background.

IMPRESSION:

FNA smears from abdominal swelling and left forearm swelling
Benign lipomatous lesion - lipoma

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of multiple fibroids P/S-Cervix central, bulky, reddish mass 2x1 cm

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of Watery cervical discharge

GROSS DESCRIPTION: one prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Reactive cellular changes associated with inflammation. with shift in flora

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Exfoliative Cytology

SPECIMEN: Broncho alveolar lavage fluid for cytology

CLINICAL DETAILS: Post TB sequelae- left sided cavitary pulmonary abscess.

GROSS DESCRIPTION: Volume- 10ml, Colour-colourless, appearance- clear, clot present

MICROSCOPIC DESCRIPTION: Cyto-centrifuge smears show scattered benign squamous epithelial cells with alveolar macrophages and endo bronchial cells against mixed inflammatory dirty mucoid background. No atypical cells seen.
Special stain for AFB is negative

IMPRESSION:

Broncho alveolar lavage fluid for cytology
Negative for malignancy

Note: Cell block is under process, if any additional finding seen, an addendum report will follow.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Infertility under evaluation P/S- white discharge present

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT:

Inflammatory smear with Shift in flora suggestive of bacterial vaginosis.

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: Two FNAC slides for review Cyto no : 0011/2023

CLINICAL DETAILS: C/o swelling in Left side of neck in lower region. On examination, Single swelling of size 3x3cm, present in left supraclavicular region, mobile horizontally. FNAC(outside 4/1/23) Malignant neoplasm favours possibility of Malignant peripheral nerve sheath tumor D/D, Metastatic deposits.

GROSS DESCRIPTION: Recieved two giemsa stained slides labelled as cyto no 0011/2023

MICROSCOPIC DESCRIPTION: FNA smears are cellular show small clusters and few singly scattered highly pleomorphic cells. Cells are large with high N:C ratio, hyperchromatic nuclei, prominent nucleoli, and moderate eosinophilic cytoplasm. At places, cells show binucleation, and occasional tumor giant cells. Background is hemorrhagic with few stromal fragments of benign elongated spindle cells.

IMPRESSION:

Two FNAC slides for review Cyto no : 0011/2023
Positive for Malignancy

NOTE: Clinico-radiological correlation needed.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:USG guided FNAC of right cervical lymph node.

CLINICAL DETAILS:Complaint of neck swelling since 3 years, no history of TB, fever, weight loss, USG- well defined discrete oval, right level II lymph node with thin central hilum likely necrotic. 6mm in short axis .

GROSS DESCRIPTION: Aspirate was blood mixed (Aspirator Dr Shashikant SR Radiology)

MICROSCOPIC DESCRIPTION:USG guided FNAC from cervical lymph node are richly cellular show heterogenous population of reactive lymphoid cells composed of centrocytes, centroblasts , immunoblasts and tingible body macrophages against hemorrhagic background. No atypical cells or granuloma seen.
Special stain for AFB is negative

IMPRESSION:

USG guided FNAC of right cervical lymph node.
Reactive lymphadenitis

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain in lower abdominal pain P/S Cervix healthy, vagina healthy.
no discharge present,

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Routine screening P/S- Cervix healthy, vagina healthy. no discharge

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Atrophic smear with dense inflammatory background

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNAC, Left cervical lymph node

CLINICAL DETAILS:Known case of Ca cervix, diagnosed in november 2022, Operated in november.Now presented with swelling in neck left cervical region. On examination- Multiple cystic swellings corresponding to Left cervical lymph nodes, 4x4.5cm in size, soft to firm in consistency, with irregular borders.

GROSS DESCRIPTION:Aspirate, 2ml Straw colored fluid

MICROSCOPIC DESCRIPTION:Cytocentrifuge smears from fluid aspirated show scattered mature lymphocytes against thin proteinaceous background. No atypical cells seen.

IMPRESSION:

FNAC, Left cervical lymph node
Suggestive of lymphatic cyst

Adv: Excisional biopsy for corrlation.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Grade III prolapse with ectocele, cystocele

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Negative for intraepithelial lesion or malignancy with occasional clusters of squamous metaplastic cells

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
