Referred Doctor	:	Patient Type	: IPD	

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:USG guided FNAC from bilateral axillary lymph nodes.

CLINICAL DETAILS:Known case of carcinoma of breast, With complaint of breast lump since 5 months, ulceration in right breast since 15days.On USG-Bilateral axillary necrotic lymphadenopathy.

GROSS DESCRIPTION:Aspirate was whitish (Aspirator .Dr Narendra PG Jr. Radiology)

MICROSCOPIC DESCRIPTION:FNA smear studied from bilateral axillary swelling are highly cellular ,show epithelial cells in large three dimensional clusters, small groups and scattered singly . Tumor cells have increased N:C ratio with pleomorphic hyperchromatic nuclei and moderate amount of cytoplasm. Cells show cytoplasmic vacuolation, some of the nuclei show prominent nucleoli. Background is haemorrhagic with mature lymphocytes, necrotic debris and degenerated cells noted.

IMPRESSION:

USG guided FNAC from bilateral axillary lymph nodes.

Positive for malignancy.

suggestive of metastatic deposits in bilateral axillary lymph nodes in a known case of Carcinoma breast.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:USG guided FNAC from left lobe of thyroid

CLINICAL DETAILS:History of neck swelling since 15 years, not increasing in size, history of squamous cell carcinoma of external auditory canal operated on last year. On USG- multiple lesions in both lobes and isthmus, lesions are solid hyperechoic with smooth margins, TIRADS II, largest lesion in left lobe size-2.0x3.1x2.6cm. FNAC(17/11/21 outside) Benign follicular nodule left thyroid.

GROSS DESCRIPTION:Blood mixed aspirate (Aspirator Dr. Srinath PG JR Radiology)

MICROSCOPIC DESCRIPTION:FNA smears show clusters and groups of benign follicular epithelial cells with repeated microacinar pattern. Few follicular epithelial cells show Hurthle cell change, nuclear crowding and overlapping present, No evidence of malignancy. Background show thick colloid in blood.

IMPRESSION:

USG guided FNAC from left lobe of thyroid

Suggestive of Follicular nodular disease of thyroid - The Bethesda System for Reporting Thyroid Cytopathology - Category -II

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Mild white discharge present

GROSS DESCRIPTION: one prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Reactive cellular changes associated with inflammation.

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Exfoliative Cytology

SPECIMEN:Urine for cytology

CLINICAL DETAILS:Complain of hematuria since . USG- Hetrogenously enhancing soft tissue lesion involving apex, right lateral wall and base of urinary bladder with extension into neck region . Ca urinary bladder. Previous biopsy(OUTSIDE 07.03.23)- concistent with low grade papillary urothelial transitional cell carcinoma , does not infiltrate deep muscular layer

GROSS DESCRIPTION: 20ml, pale yellow, hazy. Clot absent.

MICROSCOPIC DESCRIPTION:Cytocentrifuge smears show predominately scattered transitional urothelial epithelial cells, and few papillaroid clusters with fibrovascular core. Cells show slightly increased N:C ratio (>0.5%), regular nuclear membrane, hyperchromatic nuclei and scant cytoplasm. Few cells show squamous differentiation and degenerative changes. Background show abundant bacillii.

IMPRESSION:

Urine for cytology

Features are suggestive of Low grade urothelial carcinoma.

Adv: Biopsy correlation.

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Inflammatory Smear

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN: FNA of right upper neck swelling

CLINICAL DETAILS: complaints of right upper neck swelling in parotid region since november, h/o evening rise in temperature with chills present. USG(8/10/23): multiple variable sized cystic lesion seen involving right submandibular region and right sided lower part pf parotid, ? necrotic clumped lymphadenopathy. O/E: ill-defined, soft, cystic single swelling measuring 5x5cm in right submandibular region.

GROSS DESCRIPTION: 1 ml of clear fluid aspirated.

MICROSCOPIC DESCRIPTION:FNA smears show mature lymphocytes in fluid proteinaceous background. No granuloma seen.

IMPRESSION:

FNA of right upper neck swelling

BENIGN CYST, POSSIBILITY OF LYMPHATIC CYST CANNOT BE RULED OUT.

Exfoliative Cytology

SPECIMEN:Pleural fluid for cytology

CLINICAL DETAILS: Complaint of dry cough since 2 months, increasing on lying down, On examination- decreased air entry on left side of chest.

GROSS DESCRIPTION:Volume-5ml, Colour- yellowish, appearance- Slightly turbid, Clot- absent

MICROSCOPIC DESCRIPTION:Cytocentrifuge smears show scattered mature lymphocytes against mucinous background. No atypical cells seen.

IMPRESSION:

Pleural fluid for cytology

NEGATIVE FOR MALIGNANT CELLS, THE INTERNATIONAL SYSTEM FOR REPORTING SEROUS FLUID CYTOLOGY- CATEGORY II

Note:Cell block is under process, if any additional finding seen, an addendum report will follow.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNAC of right sided neck swelling.

CLINICAL DETAILS:Right sided neck swelling since one month, no history of fever, weight loss or TB, no complaint of any ear discharge.On examination- swelling in right posterior triangle of neck, 2x1cm in size, painful, it was firm to hard, matted with grooving, overlying skin was normal.

GROSS DESCRIPTION:Aspirate was bloodmixed

MICROSCOPIC DESCRIPTION:FNAC smears of swelling from posterior triangle are richly cellular show heterogenous population of reactive lymphoid cells composed of centrocytes, centroblasts , immunoblasts and tingible body macrophages against hemorrhagic background. No atypical cells or granuloma seen.
Special stain for AFB is negative

IMPRESSION:

FNAC of right sided neck swelling.
Reactive lymphadenitis

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: mass coming out from vagina

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT:

Shift in flora suggestive of bacterial vaginosis with atrophic changes in smear

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Exfoliative Cytology

SPECIMEN:CSF for cytology

CLINICAL DETAILS: Complaint of altered sensorium with history of fever, vomiting, headache, and weakness, no history of trauma, known case of diabetes and hypertension not on medication.

GROSS DESCRIPTION:Volume-0.5ml, colour- colourless, appearance- clear, clot- absent.

MICROSCOPIC DESCRIPTION:FNA smears show bacterial colonies and fungal elements only.

IMPRESSION:

CSF for cytology
Contamination sample

Note:Advice Repeat fresh sample.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNAC of right breast lump

CLINICAL DETAILS:complaint of right breast swelling since 4 months, not associated with pain, no history of trauma, fever, not associated with menstruation. On examination- lump in right upper outer quadrant, 2x3cm in size, which was well defined, mobile, overlying skin was also normal and no axillary lymph nodes were present, Contralateral breast tissue was normal.

GROSS DESCRIPTION:Aspirate was blood mixed.

MICROSCOPIC DESCRIPTION:FNA smears from right breast lump are cellular. Show monolayered sheets and clusters of ductal epithelial cells. Background show numerous bare bipolar nuclei and few stromal fragments. No cellular atypia seen.

IMPRESSION:

FNAC of right breast lump

Fibroadenoma,-IAC Yokohama category II

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Cmplain of pain in abdomen P/S-cervix healthy, vagina healthy, curdy white discharge, LMP-22.12.22

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Inflammatory Smear

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNAC from left thumb swelling.

CLINICAL DETAILS:Complaint of left thumb swelling since 1 year, not associated with pain, no history of trauma. On examination- there was a single swelling, soft to firm, 2x1cm, overlying skin was normal, ?attached to underlying fascia, mobile in one direction, swelling regressed partially after 1ml of only bloodmixed aspirate.

GROSS DESCRIPTION:Aspirate was bloodmixed.

MICROSCOPIC DESCRIPTION:FNA smear shows scanty cellularity comprised of clusters of benign spindle cells arranged in loosely cohesive groups, the cells have elongated nuclei with bland chromatin and scanty cytoplasm, No evidence of atypia.

IMPRESSION:

FNAC from left thumb swelling.

Possibility of benign spindle cell lesion can be considered.

Note:Correlate with radiological findings

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:USG guided FNAC of left breast lump.

CLINICAL DETAILS: Complaint of breast lump of bilateral breast, Mammography(15/11/22) - Fibrocystic changes in bilateral breasts(BIRADS II lesions).

GROSS DESCRIPTION: Left breast lump- 5ml of clear yellow fluid. Right breast lump- haemorrhagic aspirate.(Aspirator Dr. Narendra PG Jr. Radiology)

MICROSCOPIC DESCRIPTION:

FNAC smears from left breast lump fluid are acellular.
FNA smears from right breast lump show only haemorrhagic aspirate

IMPRESSION:

FNA Left breast lump - Negative for malignancy benign cystic lesion.
FNA Right breast lump- See microscopic description

Note:Cell block is under process, if any additional finding seen, an addendum report will follow.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:USG guided FNAC of right cervical lymph node.

CLINICAL DETAILS: Known case of SLE with lupus nephritis with pyrexia of unknown origin under evaluation,now presented with right cervical lymphnode swelling. On USG- Multiple conglomerate of necrotic lymph nodes, 3x2cm, Right side of neck.

GROSS DESCRIPTION: Pus aspirate(Aspirator Dr. Srinath .PG Jr radiology)

MICROSCOPIC DESCRIPTION: FNA smear studied shows only polymorphs and macrophages admixed with necrosis in background, no atypical cells seen.
Special stain ZN is negative

IMPRESSION:

USG guided FNAC of right cervical lymph node.
Acute necrotizing lymphadenitis with suppurative change .

Note:Correlate with clinical and other laboratory findings.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:USG guided FNAC of thyroid

CLINICAL DETAILS: History of swelling in front of neck ,On examination- size 3x3cm,diffuse, involving bilateral thyroid, firm to soft, OnUSG- diffusely bulky thyroid with heterogenous echotexture and increased vascularity, Size- Right lobe-4.5x2.0x2.2cm, Left lobe - 4.6x2.0x1.8cm.

GROSS DESCRIPTION:Blood mixed aspirate (Aspirator Dr.Shrinath pg jr radiology)

MICROSCOPIC DESCRIPTION:FNA smears are moderately cellular shows benign follicular epithelial cells in cluster and groups with hurthle cell change. Background show predominately lymphocytes surrounding the follicles and thick colloid mixed with blood.Occasional epithelioid and multinucleated giant cells noted.

IMPRESSION:

USG guided FNAC of thyroid

Suggestive of Lymphocytic thyroiditis.- The Bethesda System for reporting Thyroid Cytopathology - Category II

Referred Doctor	:	Patient Type	: IPD	

Exfoliative Cytology

SPECIMEN:CSF for cytology

CLINICAL DETAILS:Known case of T cell ALL on induction therapy .Patient complaining of generalized weakness since 1 month. Venous doppler right upper limb- Thrombus in the right IJV sunclavian , axillary and basilic vein .

GROSS DESCRIPTION:200ml, colourless, clear, clot absent

MICROSCOPIC DESCRIPTION:Cytospin smears are acellular .

IMPRESSION:

CSF for cytology

Acellular

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Routine screening P/S- cervix healthy, vagina healthy, no discharge
LMP-11.1.23

GROSS DESCRIPTION: One prepared slide

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION/RESULT:

Inflammatory Smear

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Complain of prolonged menses P/S-cervix healthy vagina healthy no discsrg

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT:

Inflammatory Smear with occasional metaplastic cells seen

Note :Repeat smear after inflammation subsides.

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.
2. Liquid Based Cytology is validated for screening for epithelial cell abnormalities of cervix only and not inflammatory lesions.

Exfoliative Cytology

SPECIMEN: Pleural fluid for cytology

CLINICAL DETAILS: Right sided pleural effusion, known case of old MDR TB, complaint of dyspnea on exertion and at rest. previous cytology of pleural fluid (11/1/23)- small mature lymphocytes, neutrophils, reactive mesothelial cells, benign squamous epithelial cells.

GROSS DESCRIPTION: Volume-5ml, Colour- red, Appearance- hazy, Clot- absent

MICROSCOPIC DESCRIPTION: Cytocentrifuge smears show few mature lymphocytes on a haemorrhagic background.
Special stain for AFB is negative.

IMPRESSION:

Pleural fluid for cytology

NEGATIVE FOR MALIGNANT CELLS (INTERNATIONAL SYSTEM OF REPORTING SEROUS FLUID- CATEGORY II)

Note: Cell block is under process, if any additional finding seen, an addendum report will follow.

LIQUID BASED CYTOLOGY - GYNAEC CERVICAL CYTOLOGY

SPECIMEN TYPE: Liquid based preparation (The 2014 Bethesda System)

CLINICAL HISTORY: Secondary infertility P/S- 0.5x0.5 cm polyp seen from cervix

GROSS DESCRIPTION: One prepared slides

SPECIMEN ADEQUACY:

Satisfactory for evaluation; endocervical/transformation zone component present

GENERAL CATEGORISATION:

Negative for intraepithelial lesion or malignancy

INTERPRETATION /RESULT:

Shift in flora suggestive of bacterial vaginosis.

Note :

Comments:

1. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false negative and false positive results. Follow up of unexplained clinical signs and symptoms are recommended to minimize false negative result.

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:USG guided FNAC of right thyroid swelling.

CLINICAL DETAILS: Complaint of neck swelling since 1.5 years, On examination- 3x4cm right thyroidfirm, non tender, moves with deglutition.USG- Solid heterogenously iso hypoechoic lesion- 3.1x4.4x2.3cm in size, Right lobewider than taller, well defined margins, few internalmacro calcifications present - TIRADS-IV

GROSS DESCRIPTION:Blood mixed aspirate(Aspirator Dr. Srinath PG Jr. radiology)

MICROSCOPIC DESCRIPTION: FNA smear studied are moderately cellular show follicular epithelial cells arranged in loosely cohesive groups ill defined follicular pattern. Cells have moderate to abundant cytoplasm with round to oval nuclei and fine chromatin . Occasional colloidophages seen in haemorrhagic background.

IMPRESSION: USG Guided FNAC of right thyroid swelling ,
Suggestive of Follicular nodular disease of thyroid with cystic change, - Bethesda system of reporting
Thyroid cytopathology- Category II

Fine Needle Aspiration Cytology (FNAC)

SPECIMEN:FNA from scalp swelling

CLINICAL DETAILS:Complain of swelling over scalp since 5YEARS . No history of pus discharge , painless, fever or weight loss. O/E- Single swelling 1x1 cm soft to firm, partially mobile covered with hair., mild erythema present No punctum seen

GROSS DESCRIPTION:Blood mixed aspirate

MICROSCOPIC DESCRIPTION:FNA smears from scalp swelling are hypercellular comprised of large lobules of sebaceous cells having vacuolated cytoplasm with centrally placed round regular nuclei . Occasional anucleated squames are also seen . Background is greasy hemorrhagic.

IMPRESSION:

FNA from scalp swelling

Benign sebaceous neoplasm.

Differentials considered are - 1. sebaceous hyperplasia
2. sebaceous adenoma

ADVISE :Excision and HPE
