HOSPITAL COURSE: Patient presented with above mentioned complaints and found to have hyperglycemia. Later, she went into shock and had poor respiratory effort due to severe metabolic acidosis with compensatory respiratory alkalosis and hyperkalemia. Emergency intubation was done and started on sodabicarb infusion for acidosis, inotropes for shock, insulin infusion for hyperglycemia and antibiotics for suspected pyelonephritis. Nephrology opinion taken i/v/o decreased urine output and 1 session of hemodialysis done following which acidosis resolved. NCCT KUB was done and urology opinion was taken - reported as right sided pyelonephritis with cholelithiasis and advised no immediate intervention. Antibiotics were continued while monitoring RFT and glycemic control was achieved.

Currently patient is hemodynamically stable with controlled sugars and decreasing trend of creatinine.
